What is Malware Removal?

Has your website been infected or blacklisted? Malware removal is essentially the scanning and removal of infected files on your website or computer. The process is a series of actions that must be taken following a hack or injection of corrupted files. Malware is malicious software typically used for illicit reasons that disturbs the normal function of websites, apps, and computers. Its removal is essential to the security of your information. The software is used by hackers to gain access to your system in order to gather sensitive data, system access, and further extortion purposes. Therefore, we initiate the removal process immediately after you contact us.

Hackers can use exploit kits in order to install Trojans on your computer. You also may be familiar with spam email with infected attachments used by hackers to take advantage of your data. It's our guarantee to remove the malware causing your issue and restore your site to full function. Our malware removal services are conducted by experienced professionals. With Techforing, you get real, live professionals working on your issue, not automated software. The malware removal process should initiate as soon as you know something is wrong, the more time that passes, you're subject to compromise and data loss.

Why do you need malware removal?

Malware left on your system can be detrimental for an individual or business. There is no industry or country that hasn't been subject to the negative effects of malware. Although it is a widespread problem, there is a solution. Through the utilization of system monitors, malware leaves the potential to steal your financial data, your customer's data, in addition to gathering more information without your knowledge.

A user's privacy is completely sabotaged by the presence of this harmful software. If you operate a site that benefits from any Google traffic, malware on your site poses a considerable threat. You can become blacklisted and this exclusion is significant but it can be recovered from. They key to recovery is to take action immediately after discovering the malware.

Our malware removal services eliminates issues such as:
- Redirects
- System crashes
- Clickjacking
- Erroneous messages and iframes
- Frozen screens
- Significantly reduced computer functionality

- Reduced hard drive space
- Abnormally high network activity

What we offer?

We're proud to say that we've helped a great deal of people avoid the paralyzing effects that malware has on life and business. Our team of experts has more than a decade of hands on experience providing malware removal services. Removing malware from your website is no problem because that's a small part of the many services we offer.

No matter how complex your malware issue is, removal is conducted in three steps:
1. Detailed scanning, removal, and replacement of infected software & files
2. Update of script, themes, and plugins
3. Prevention of future malware injection

Following malware removal, your site will be updated, secured, and hardened. All necessary updates are included with service, as outdated software can pose security issues. You'll receive a full report of all changes made to your site including any additional security and blacklist removal. We go the extra mile to remove and replace each infected file and secure your website against hackers. We understand that a malware infection occurs unexpectedly and we're available to help you whenever you need it. Continue to benefit from professional maintenance and continued assistance from an experienced support staff.
