

Conquering a mountain of challenges

Drilling the world's longest high-speed railway tunnel in the Swiss Alps required both high-performance Timken® bearings and seamless logistics. Timken production, customer service and supply chain groups worked hand-in-hand to help complete this 95-mile mountain passage more efficiently, connecting passengers from Zurich to Milan.

Keeping people in motion

Ensuring strength, flexibility and quicker recoveries after knee surgery involved big thinking, Timken® super-precise components and dependable performance. Timken® bearings operate in the robotic surgical arms during the delicate procedure, delivering less-invasive treatment and better patient outcomes.

Mining for answers

Keeping conveyor belts running 24/7 in a South African coal mine requires equipment that withstands extreme stress and heat. Timken service engineers devised a solution using Timken® housed units that allows the mine to operate more reliably, thereby better meeting the region's critical energy needs.

Reaching energy from the depths

Offshore well designs require landing strings with hoisting capacity approaching two million pounds. Timken® high-performance steel ensures the necessary load-carrying capacity and hydraulics to reach the deepest fathoms of the sea.

Table with 7 columns (M, T, W, T, F, S, S) and 5 rows of dates. Includes country codes (e.g., AR, AUS, BR, CA, CH, D, DK, E, FIN, GB, GR, IRL, MX, N, NL, P, RSA, S, SGP, USA, TK) and small calendar insets for March and May.

Harnessing the power of the wind

The world's largest offshore wind turbine rises as tall as a 32-story skyscraper and weathers temperature fluctuations between 23 and 95 degrees Fahrenheit. Timken designers developed the optimal solution that allows these turbines to function day in and day out, easily handling gentle breezes and gale-force winds.

Staying on track in harsh conditions

Moving more than 430 million tons of iron ore each year through one of the world's most extreme environments demands new approaches to transportation. The newest Timken® AP-2™ bearing design helps carry the heaviest loads, keeping operations on track while establishing a new standard of performance in the Australian Outback.

Restoring forest health from the sky

Restoring forest health and resiliency in the Pacific Northwest calls for the diligent but delicate act of airlifting wood by helicopter. Timken provides a wide range of precision aircraft products to customers who perform “helilogging” – removing dead and diseased trees by air so that remaining timber can thrive on available resources.
